## Description

Remote access provides an immediately scalable way to train with allied forces from anywhere, and helps you adhere to NZDF directives on combat-capability, flexibility, and readiness to operate alongside partners in cyber. Remote access eliminates the costs incurred by flying or housing soldiers halfway around the world, and will open up new opportunities for simulating joint operations with partners.

As the NZDF builds out its own cyber ranges, having secure remote access will immediately allow for allied information exchange and training opportunities within the commercial sector.

Value to the Warfighter

- Real-time monitoring and screen recordings available for playback.
- Customizable training desktop environments with your loadout.
- Rapidly buildable and disposable virtual desktops.
- Cost & Wear-and-Tear savings from eliminating soldier travel/housing.

Dispel Multi-Cloud Disassociating Network

Train in cyber ranges with allied forces from anywhere.

Training Center Features

Global interoperability: Deploy remote access pathways to training centers in any of over 250 global data centers to efficiently leverage allied resources.

Automated desktops at scale: Provide trainees with single-use desktops, launched with a click of a button and automatically configured with your custom loadout.

Instructor view: Watch your trainees desktops in real-time, and request screen control when needed.

Aligning with the NZDF Strategic Plan

Provides access to allied resources for the NZDF to remain "combat capable, flexible and ready to operate alongside its partners" and develop a "range of military capabilities that are ready and able to be deployed anywhere in the world to operate in a range of high-threat environments."

Enables NZDF to "facilitate the passage of information and intelligence within the context of joint, multinational, and interagency operations."
